

An increase in detection rates of the critically endangered Baltic Proper harbor porpoise in Swedish waters in recent years

Kylie Owen, Martin Sköld, Julia Carlström

Data availability

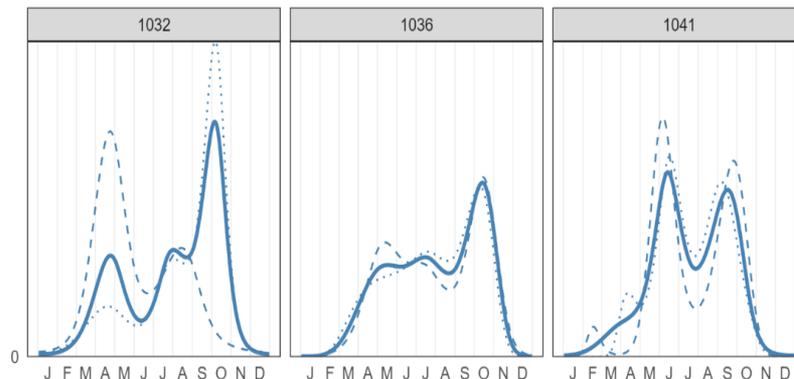

- SAMBAH project:
 - 2 years of data (2011 – 2013)
 - During May – October most of the detections were in Swedish waters

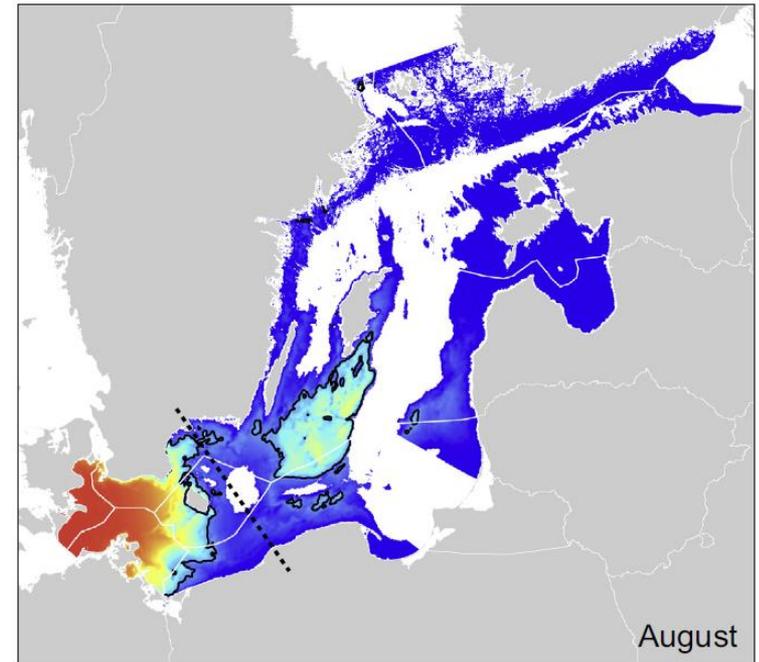

Carlén et al. (2018) Biological Conservation

Data availability

- SAMBAH project:
 - 2 years of data (2011 – 2013)
 - During May – October most of the detections were in Swedish waters
- Swedish national monitoring program (SNMP):
 - 12 stations
 - 3.5 years of data (2017 – 2020)
 - Highest detection frequency during May – October

Owen et al. (2021) Conservation Science and Practice

Carlén et al. (2018) Biological Conservation

- Compare detection frequency during May – October from SAMBAH (2011-2013) with the SNMP (2017-2020)

- Compare detection frequency during May – October from SAMBAH (2011-2013) with the SNMP (2017-2020)
- Determine the trend in detection rates over the years

- Compare detection frequency during May – October from SAMBAH (2011-2013) with the SNMP (2017-2020)
- Determine the trend in detection rates over the years
- Estimate the power to detect a 5% change over 10 years in the Baltic Proper data

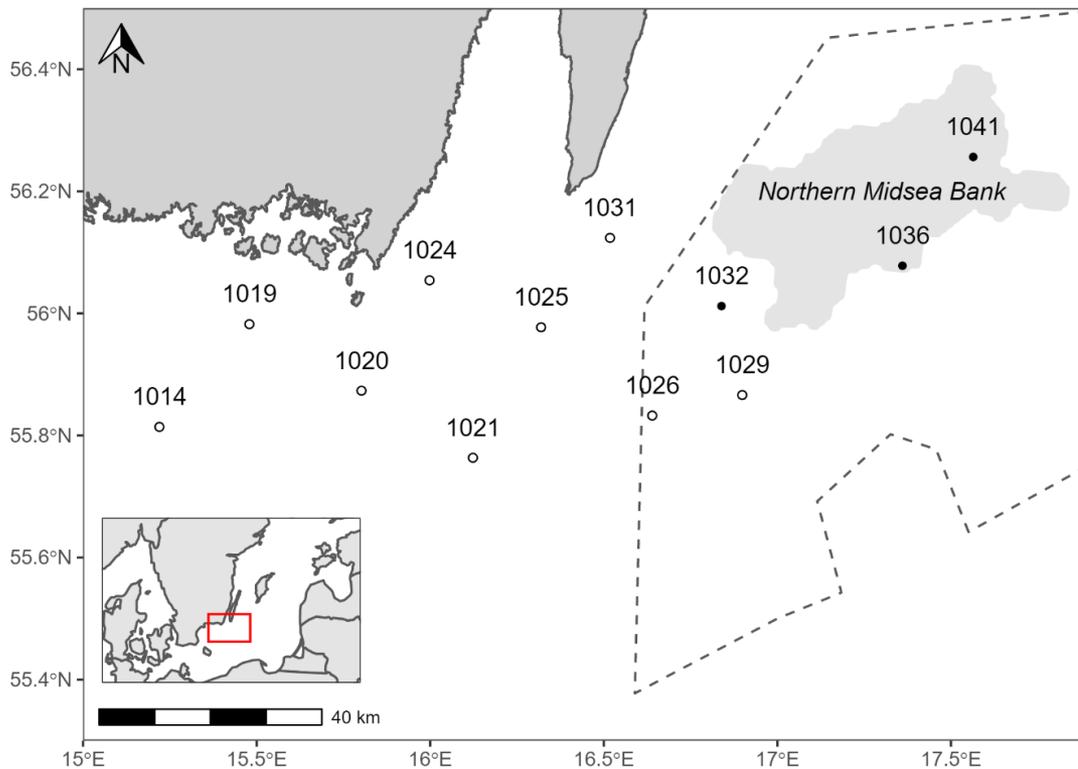

- Compare detection frequency during May – October from SAMBAH (2011-2013) with the SNMP (2017-2020)
- Determine the trend in detection rates over the years
- Estimate the power to detect a 5% change over 10 years in the Baltic Proper data
- Estimate the number of years required to have 80% power to detect a 5% change in this region

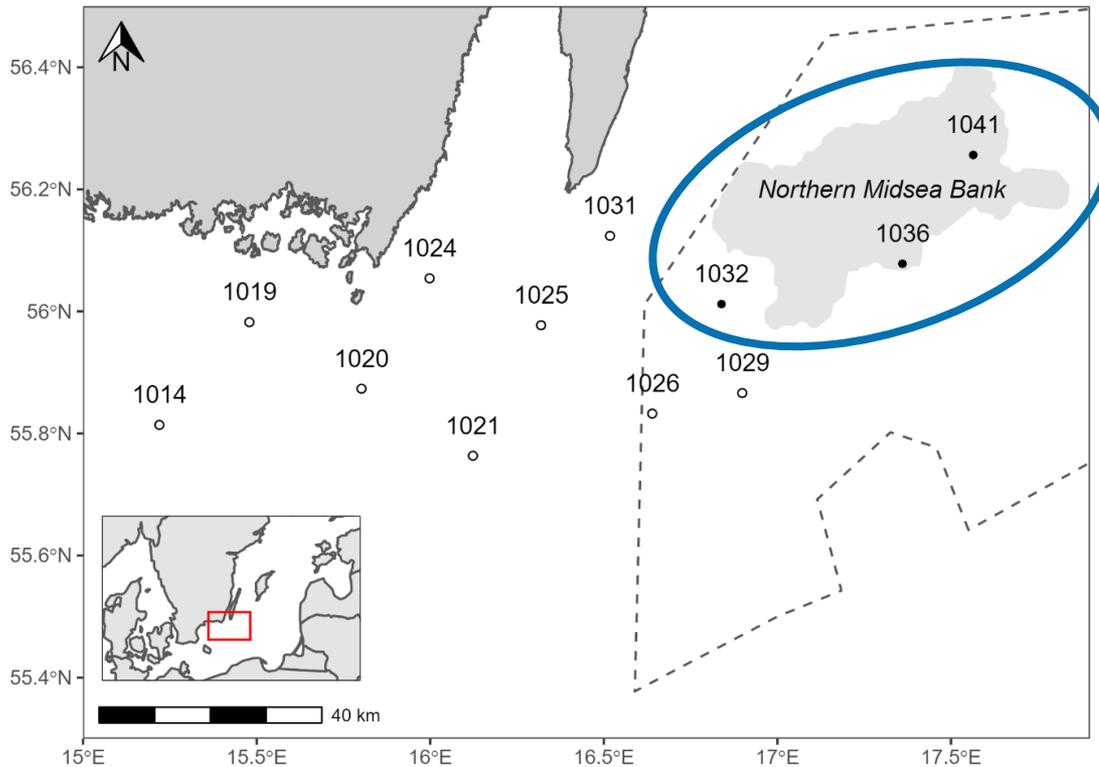

- Problem with critically endangered species: very little data

- Problem with critically endangered species: very little data
- Trend and power analyses focus on three stations (black dots):

- Problem with critically endangered species: very little data
- Trend and power analyses focus on three stations (black dots):

- Had most data
- In the Natura 2000 area (- - - -)
- On or near Northern Midsea Bank

- On average, 29% more detection-positive hours / day

Results

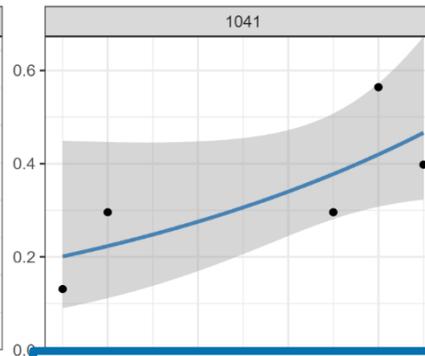

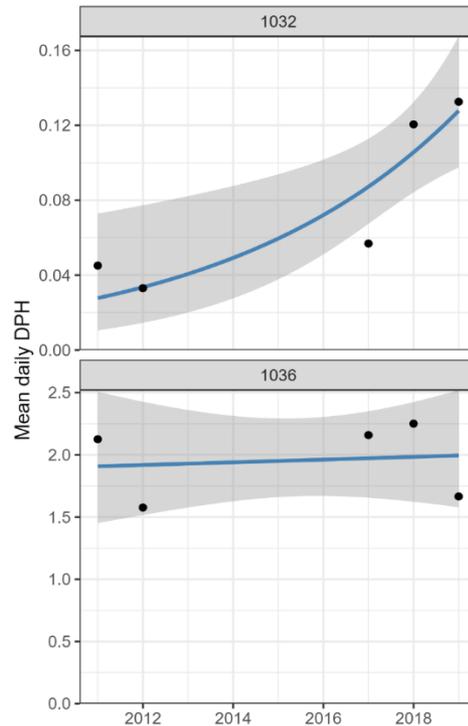

- On average, 29% more detection-positive hours / day
- Increase at 10 of 12 stations (83%) (5 – 479% higher)

Station	May - October							Change DPH (%)
	Days reordred		DPD		Daily mean DPH			
	SAMBAH	SNMP	SAMBAH	SNMP	SAMBAH	SNMP		
1014	415	466	4	21	0.010	0.056	479	
1019	336	366	0	24	0.000	0.085	NA	
1020	284	504	2	6	0.007	0.012	69	
1021	147	154	4	1	0.041	0.006	-84	
1024	266	254	0	0	0.000	0.000	NA	
1025	356	435	2	5	0.008	0.014	64	
1026	234	465	3	14	0.013	0.045	252	
1029	272	183	7	10	0.033	0.087	164	
1031	377	527	0	7	0.000	0.013	NA	
1032	420	493	14	39	0.036	0.097	173	
1036	359	464	236	337	1.855	1.950	5	
1041	353	438	56	132	0.212	0.438	106	
All stations	3819	4749	328	596	0.205	0.265	29	

Results

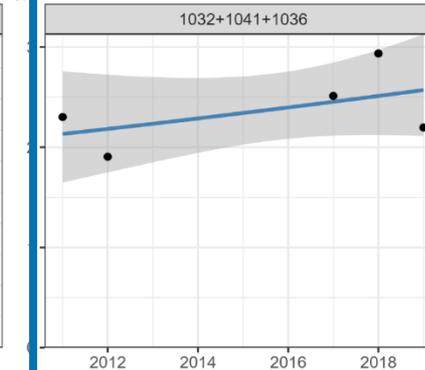

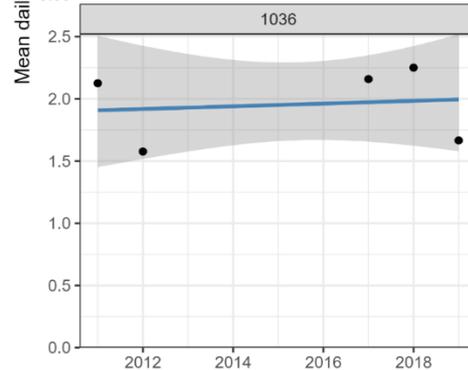

- Trend at three stations, and the combination of these
- Combined trend: 2.4% increase per year (95% CI -4.4–9.6)

15.9% (0.3 – 34.0)

12.6% (-4.2 – 32.0)

0.6% (-7.3 – 9.2)

2.4% (-4.4 – 9.6)

- Combined, the three stations had > 80% power to detect a 5% change over 10 years data

Station	Yearly trend %	Power to detect trend based on 10 years data		Years required for 80% power	
		-5%	5%	-5%	5%
1032	15.9 (0.29, 34)	0.36 (0.11)	0.34 (0.11)	16	16
1036	0.6 (-7.3, 9.2)	0.73 (0.19)	0.69 (0.18)	11	11
1041	12.6 (-4.2, 32)	0.31 (0.11)	0.29 (0.1)	17	17
1032+1041+1036	2.4 (-4.4, 9.6)	0.86 (0.24)	0.82 (0.22)	10	10

Results

- Combined, the three stations had $> 80\%$ power to detect a 5% change over 10 years data
- Individually, over 15 years of data may be needed.

Station	Yearly trend %	Power to detect trend based on 10 years data		Years required for 80% power	
		-5%	5%	-5%	5%
1032	15.9 (0.29, 34)	0.36 (0.11)	0.34 (0.11)	16	16
1036	0.6 (-7.3, 9.2)	0.73 (0.19)	0.69 (0.18)	11	11
1041	12.6 (-4.2, 32)	0.31 (0.11)	0.29 (0.1)	17	17
1032+1041+1036	2.4 (-4.4, 9.6)	0.86 (0.24)	0.82 (0.22)	10	10

- Combined, the three stations had > 80% power to detect a 5% change over 10 years data
- Individually, over 15 years of data may be needed.
- Supports the need for continuous monitoring in the Baltic Proper to detect changes

Station	Yearly trend %	Power to detect trend based on 10 years data		Years required for 80% power	
		-5%	5%	-5%	5%
1032	15.9 (0.29, 34)	0.36 (0.11)	0.34 (0.11)	16	16
1036	0.6 (-7.3, 9.2)	0.73 (0.19)	0.69 (0.18)	11	11
1041	12.6 (-4.2, 32)	0.31 (0.11)	0.29 (0.1)	17	17
1032+1041+1036	2.4 (-4.4, 9.6)	0.86 (0.24)	0.82 (0.22)	10	10

- Potential indication that the decline has stalled or that the population has started to increase?
- However, only detection rates in part of the range...
- Trend much lower than what is possible for porpoises

- Potential indication that the decline has stalled or that the population has started to increase?
- However, only detection rates in part of the range...
- Trend much lower than what is possible for porpoises
- Urgent need for:
 - Measures to reduce threats and protect porpoises
 - New abundance estimate (SAMBAH II LIFE)
 - Better / more data on:
 - Bycatch rates,
 - Demography,
 - Prey (SAMBAH II LIFE),
 - Environmental toxins,
 - Spatial overlap with threats (SAMBAH II LIFE).

Thankyou
